

Protective Foam Solutions

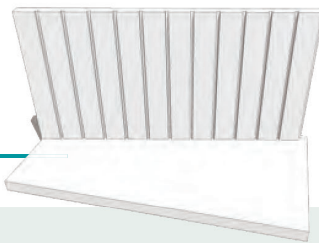

All your foam needs, all in one place.

At Alleguard, we're built from the ground up to expand and shape your business. We are leading the way in custom foam solutions across North America. We understand the diversity of challenges that customers are facing across different industries— these challenges are also opportunities, and whether our customers are in construction, protective packaging, cold-chain or other industries, we are relentless in seeing around corners and going the extra mile to help their businesses succeed. Our breadth and depth of engineering expertise, materials knowledge and geographic reach allow us to not only meet but also, surpass our customers' expectations across industries.

EPS Insulation

Expanded Polystyrene (EPS) foam provides an effective solution to economically insulate your commercial flat and slope roof, walls, foundations and slabs. Available in Fanfold, Flute Fill, Holey Board, Tapered EPS and Sheets. Laminated film options also available.

EIFS

Alleguard Exterior Insulation and Finishing Systems consists of a high performing EPS substrate that can be integrated with a base coat, mesh, and a finishing coat, providing broad design and color flexibility, low maintenance, high durability, and increased energy efficiency.

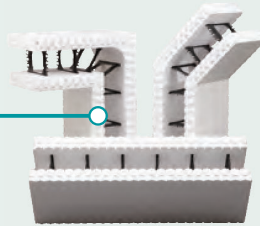

Geofoam

Geofoam's affordability, R-Value retention, light weight, and durability make it the perfect choice for civil engineering and infrastructure applications such as slope stabilizer, retaining wall backfill, road embankments, pavement insulation and stadium stair and stage fill.

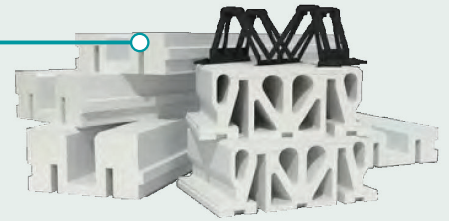

1 Amvic™ ICF R22

A cost effective ICF block providing excellent performance and value to any construction project with a wide range of forms and core sizes.

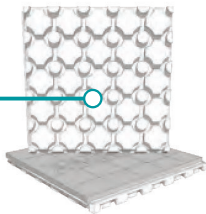

2 Amvic™ ICF R30

A higher performance block where panel thickness has been increased by 30% making it the highest R-value of any factory assembled block in the industry.

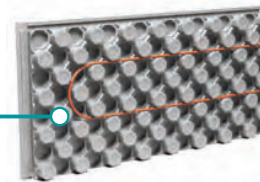

3 Amdeck Pro/Eco

A modular concrete slab with an integrated joists system that allows an engineer to maximize the clear span and potentially reduce the temporary shoring.

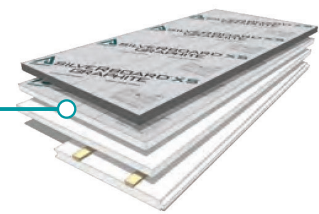

4 Amrad

An insulated under slab depressurization panel and a key component in a radon gas mitigation system.

5 Ampex

Ampex combines rigid insulation, a vapor barrier and PEX tubing locking mechanism into a single solution that significantly reduces installation time.

6 Rigid Board Insulation

High Performance EPS continuous insulation for vertical applications.
